

Figure 1. The effect of the initial concentration of the monomer on the polymerization of *l*-lysine. The polymerization was carried out at 30°C in 0.1 M sodium acetate buffer (pH 4.5) with 0.01 M KSCN. The initial concentration of the monomer was 0.01 M. The initial concentration of the monomer was 0.01 M. The initial concentration of the monomer was 0.01 M.
